

Adnan Gul

**Frontend Developer || React.js Developer || Next.js Developer
|| AI Powered Web Developer**

Results-driven Senior Frontend Developer with 4+ years of experience delivering scalable, high-performance, and visually engaging web applications using React.js, Next.js, and TypeScript. Skilled in architecting modular frontend systems, optimizing rendering performance, and integrating AI-powered features to create intelligent, responsive user experiences.

Demonstrated expertise in building complex UIs, micro frontends, and enterprise-grade dashboards with real-time analytics and AI-driven automation. Adept at translating product vision into clean, maintainable, and efficient code using modern technologies including Redux Toolkit, Zustand, Framer Motion, MUI, and Docker. Passionate about advancing AI-enhanced frontend development, continuously exploring innovations in performance optimization, edge rendering, and next-generation frontend architectures.

Expertise(Skills)

Frontend Development

- React.js
- Next.js
- TypeScript
- JavaScript (ES6+)
- Redux Toolkit
- Zustand
- RTK Query
- React Hook Form
- Yup
- HTML5 / CSS3 / SASS / SCSS
- Styled Components
- Material UI (MUI)
- Framer Motion
- Chart.js / Recharts
- React Router
- Real-time Dashboards & Data Visualizations

Performance & Optimization

- Code Splitting
- Lazy Loading
- React Suspense
- AMP Integration
- Caching Strategies
- Core Web Vitals Optimization

UI/UX & Design

- Responsive Design
- Accessibility (WCAG)
- Pixel-Perfect Implementation
- Design Systems & Component Libraries
- Animation & Motion Design
- SEO Optimization

Experience

Sr. FrontEnd Developer - Nizek (December 2023 - onward |Remote)

- Led the development of high-performance, cross-platform web applications using React.js, Next.js, and TypeScript for enterprise clients.
- Integrated AI APIs and LLMs to deliver an AI-driven admin panel with intelligent customer support, predictive insights, and adaptive user experiences, enhancing operational visibility.
- Built and maintained scalable frontend modules, including:
 - Live template management and bulk upload systems with real-time progress tracking.
 - Real-time notifications via WebSockets and Server-Sent Events.
 - Dynamic form builder using React Hook Form and Yup for complex validations.
 - Live order management dashboard supporting multi-restaurant and branch operations.
 - Developed analytics dashboards using Chart.js and Recharts, visualizing live business metrics and performance trends.
- Integrated Quisk device management solution for secure, seamless transactions within the admin panel.
- Optimized rendering performance through code-splitting, lazy loading, and React Suspense, improving load times by 35%.
- Collaborated with backend teams (NestJS, REST APIs) to ensure robust front-back synchronization.
- Delivered an AI-driven admin panel, enhancing operational visibility and user experience.

Key Achievements:

- Reduced bundle size by 25% and achieved a Lighthouse score of 95+, improving overall scalability and modularity of the application. Increased team development velocity by 40% through reusable component patterns and optimized state management.

Sr. Frontend Engineer – Turing (Nov 2024 - Mar 2025 |Remote)

- Engineered AI-powered labeling and annotation platforms using React, SVG, and Canvas APIs for image, video, and vector data.
- Designed and implemented modular frontend tools to enable internal teams and external users to easily create, edit, and manage annotations.
- Built intuitive user interfaces and workflows for labeling large datasets, ensuring smooth collaboration between AI models and human reviewers.
- Optimized rendering performance and DOM manipulation for complex, large-scale annotation canvases.
- Worked closely with data scientists to integrate annotation tools into AI training pipelines and improve dataset quality.
- Developed reusable React components and toolkits to simplify how users interact with annotation shapes, bounding boxes, and masks.
- Enhanced usability and accessibility of the platform through UI/UX refinements and responsive layouts

Key Achievements:

- Improved annotation tool performance by 45% through rendering and state optimization.
- Created an internal frontend toolkit that reduced labeling setup time by 30% and improved user onboarding.
- Significantly enhanced usability and stability for AI-driven labeling systems across multiple data modalities.

FullStack Developer at AISalaam Tech House (Apr 2023 – Dec 2023 | Remote)

- Spearheaded the end-to-end development of high-performance, SEO-optimized web applications using React.js, Next.js, TypeScript, and Redux Toolkit.
- Engineered accessible, responsive, and scalable user interfaces with MUI, Framer Motion, and Styled Components, ensuring design precision and cross-platform consistency.
- Managed complex state and asynchronous data flows with RTK Query, improving API efficiency and reducing redundant calls.
- Built modular component libraries and implemented scalable design patterns, enhancing reusability and maintainability across multiple projects.
- Contributed to e-commerce platforms and admin dashboards, delivering WCAG-compliant interfaces with real-time interactivity and responsive layouts.
- Collaborated with cross-functional teams to integrate REST APIs within microservice-based architectures, ensuring scalable, secure deployments.
- Configured and maintained CI/CD pipelines with GitHub Actions, enabling automated, reliable multi-environment deployments.

Key Achievements:

- Improved application load speed by 40% through code-splitting, lazy loading, and bundle optimization.
- Delivered a unified design system, reducing UI development time by 30% and improving visual consistency across projects.
- Enhanced SEO rankings and user retention through Core Web Vitals optimization and metadata enhancements.

⚙️ Backend Development

- Node.js
- Express.js
- NestJS
- RESTful APIs
- JWT Authentication
- MongoDB
- MySQL

🚀 DevOps & Deployment

- Docker / Docker Compose
- Git / GitHub
- GitHub Actions (CI/CD)
- AWS EC2
- DigitalOcean
- Nginx

🌱 Project Management & Collaboration

- Agile / Scrum
- Code Reviews & Mentoring
- Cross-Functional Team Collaboration
- Version Control (Git)
- CI/CD Automation

Frontend Developer — Freedom Technologies (Jan 2023 – Apr 2023 | Remote)

- Developed and maintained MERN stack applications using React.js, Node.js, Express, and MongoDB, following clean architecture principles and scalable component design.
- Built interactive, responsive user interfaces with Material UI, Framer Motion, and Styled Components, improving engagement and visual consistency across products.
- Implemented secure authentication and authorization workflows using JWT, Passport.js, and Helmet, ensuring compliance with data protection standards.
- Designed and integrated RESTful APIs, enabling seamless and efficient communication between frontend and backend services.
- Optimized state management using Redux Toolkit and RTK Query, improving data flow efficiency and reducing redundant API calls.
- Containerized apps using Docker and set up GitHub Actions for automated CI/CD pipelines, ensuring stable, repeatable deployments.
- Collaborated with cross-functional teams to align UI/UX principles with backend functionality, ensuring performance and accessibility targets were met.

Key Achievements:

- Boosted frontend performance metrics by 20% through component optimization and lazy loading strategies.
- Delivered three production-ready applications ahead of schedule under agile sprint cycles.
- Strengthened platform security and reliability with advanced authentication and validation mechanisms.

FullStack Engineer — Nenu Tech (Oct 2021 – Mar 2022 | Islamabad, Pakistan)

- Developed modern, responsive web interfaces using React.js, Redux, and Material UI, ensuring seamless user experiences across devices and browsers.
- Built and optimized reusable UI components with Styled Components and React Hooks to improve scalability, maintainability, and performance.
- Implemented client-side routing and dynamic rendering with React Router DOM, enhancing navigation flow and reducing interaction latency.
- Optimized frontend performance and SEO through AMP integration, lazy loading, caching, and progressive enhancement, improving Core Web Vitals and reducing load times by up to 25%.
- Collaborated with backend engineers to integrate RESTful APIs, ensuring efficient data handling and smooth frontend-backend synchronization.
- Deployed and maintained optimized builds on DigitalOcean and AWS EC2, configuring Nginx for load balancing and asset delivery optimization.

Key Achievements:

- Reduced frontend load time by 25% through advanced caching, code-splitting, and performance tuning.
- Improved animation fluidity and UX smoothness with Framer Motion and optimized rendering strategies.
- Delivered pixel-perfect, accessible interfaces aligned with brand and WCAG accessibility standards.

FullStack Engineer — Nenu Tech (Oct 2021 – Mar 2022 | Islamabad, Pakistan)

- Delivered custom full stack web applications for diverse clients across e-commerce, education, and business automation sectors using the MERN stack (MongoDB, Express, React, Node.js).
- Developed dynamic, responsive frontends with React.js and Redux, integrating reusable UI components and ensuring cross-browser compatibility.
- Built and secured RESTful APIs with Node.js and Express, implementing JWT authentication and role-based access control for user management systems.
- Designed and managed NoSQL databases with MongoDB, optimizing queries and schema design for scalability and performance.
- Integrated third-party APIs such as Stripe, PayPal, and Google Maps to extend functionality and improve user experience.
- Configured cloud deployments using AWS and DigitalOcean, with Nginx reverse proxy and Docker containers for reliable, scalable environments.
- Collaborated with clients to translate business requirements into technical specifications, ensuring on-time delivery and seamless project execution.

Key Achievements:

- Delivered over 10 full stack applications, maintaining 100% client satisfaction through high-quality and timely delivery.
- Reduced average backend response time by 30% through optimized API endpoints and caching strategies.
- Increased frontend performance scores to 90+ on Lighthouse by applying lazy loading, code-splitting, and bundle optimization.
